

www.strategic-pharmaceuticals.com is an acquisition by JBC Corporation and is expected to become fully operational in early 2023. The platform consists of a sophisticated website and mobile app platform that works seamlessly with the brick and mortar facility that will be mirrored and edited as the business model evolves.

Estimated Revenue Generation:

Considering current government RFP's (requests for proposals), the private sector demand and the higher end discretionary budgets by multiple governmental agencies the business model was custom designed to fulfill the demands for a stand alone multi-use facility with advanced features. The ability for JBC Corporation to capture a significant portion of the multi-billion dollar contract demands currently in existence is a very real possibility. Being able to generate no less than \$100m + in orders should be the bare minimum expectation through the expansion of the business in 2023 and beyond.

Mobile App and Website Elements:

- Industry leading AES-256 Encryption,
- Two Factor Authentication security
- Single sign-on compatability

Infrastructure Elements:

- Secure Brick and Mortar Facility
- 3 stage Power and Communications Infrastructure
- EMP proof Vehicle
- CDC Bio-lab elements
- Safe-house Status

Estimated Platform Value: \$200 Million ++

Status:

This platform and the facility are being developed for JBC Corporation by www.into-reality.com as a long time corporate partner and is positioned to deploy for full operational capabilities in early 2023. For security reasons the IP (intellectual property) oned by JBC Corporation cannot be fully elaborated upon at this time.
